

Portable Medical Testing Applications

Application: Medical Imaging

Quatech Products Used: SSP-100 single port RS-232 serial PCMCIA card.

A major manufacturer of leading edge imaging technology uses Quatech SSP-100 serial PCMCIA cards to keep their medical imaging devices connected to today's laptops. Their application specialist has found that many of the service personnel are being issued laptops without standard serial ports. His solution is to provide them with an SSP-100 so that they can interface with the equipment. He has found that other manufacturer's USB to serial adapters caused conflicts with the devices' software, and opted for Quatech's SSP-100 PCMCIA based solution.
