

Portable Medical Testing Applications

Application: Portable EEG and EKG Test Systems

Quatech Products Used: Quatech SPP-100 EPP Parallel Port Card

Because of the high speed (up to 700 kbps) EPP port made available by Quatech's SPP-100, it is an ideal choice for a variety of portable medical applications. Several companies have developed proprietary EEG and EKG machines which connect with a laptop computer via Quatech's card. The parallel port on many laptop computers will not function in EPP mode under Windows 95/98. Quatech's SPP-100 will. In fact, our card is the only one available which completely adheres to the IEEE 1284 EPP specification.
